Available face to face
or via video
conference

We work with
teachers, students
or both

Interactive Technologies (1.5 hr) Introduction to the Hardware

We run through how to connect your interactive whiteboard, data projector or Mobi and give you the basics of how to get started with your Workspace software. You'll be up and running and able to get to grips with the technology prior to your professional development with our teacher trainers.

(session included with purchase)

Stage 1 (3 hr) Introduction to Interactive Whiteboard Technologies

Our trainers will demonstrate the full interactive potential of your Workspace software and how to use it to improve teaching and learning in the classroom. By illustrating the methodology with examples taken straight from the classroom, teachers and / or students will leave feeling ready to try out and develop all those ideas learnt throughout the session.

Stage 2 (3 hr) Introduction to Interactive Whiteboard Technologies

Grasp the multimedia potential of your interactive device and meet the needs of every learning style. We look at more advanced tools and how to make the most of audio, video, flash and other software applications. Personalise your Workspace to work for you and your learning context.

Advanced sessions are available to continue your learning journey - IWB+Literacy/IWB+Numeracy/IWB+Inquiry. Please contact us with your requirements and we will tailor workshops to meet your school's individual needs.
